Media Kit

Welcome

Welcome to the Smarkin

We've put this together to help you find out a little more about us and what makes us tick. As well as an introduction to Smarkin by Comper and our team, you'll find lots of useful information such as news releases, industry stats, product details, awards we've won, quotes and contact information.

As an independent manufacturer of smart medical devices, we hold a wealth of experience and expertise in this rapidly developing, incredibly exciting emerging field. We're constantly innovating and have created a suite of award winning products – the latest of which is the Smarkin. This truly unique device is the future of personalised skincare and we invite you to try it for yourself.

We're currently crowdsourcing funding to bring the Comper to even more consumers looking to perfect their skin. We'd love to tell you more about our product, show you the Smarkin in action or share some of our insight into the SMART medical space with you. You'll find our contact information at the end of this media pack.

About Smarkin and Comper

“Intelligence Brings Beauty”

Smarkin is the most developed skincare tool in the world. This consumer device is at the very forefront of beauty technology with a powerful toolset to analyze, treat and improve user's skin by RF, EMS, MASS and LED therapies.

Smarkin is the world's first SMART facial machine, designed to give each user a personalised totally tailored skincare routine. The latest product from

healthcare innovators Comper, Smarkin has been developed using a number of enhanced technologies including RF, EMS, LED and micro vibrational therapy. It helps to firm the face, fend off the signs of ageing, reduce stubborn fatty facial deposits and tackle other common skin complaints such as acne.

Founded in 2014, Comper Healthcare is the first independent manufacturer of smart medical devices

which harness the benefits of artificial intelligence within the healthcare industry. Comper's mission is to promote better lifestyles through better healthcare for individuals and families.

Product Information

Everyone's skin is unique. Luckily, Smarkin has an app for that.

Designed to assess the most suitable skincare routine for each individual user via an intelligent, groundbreaking app, the Smarkin is able to dynamically provide the right treatment settings for each user, giving optimum skincare results at home.

Users can first test their skin using the Comper Health App and give information on changes to their skin or skin disorders, periods and allergies. Next, a personal skincare schedule with reset functions is generated and sent to the Smarkin providing a completely tailored skincare and treatment routine.

This intelligent skincare device is the first of its kind and users can revisit the app at any time to combat changing skin issues such as breakouts and fine lines.

Manufactured using medical grade silicone rubber and 51mm electrode surface for treating large areas of skin at the same time, the Smarkin offers four innovative skincare technologies in one including radio frequency for skin tightening and plumping, electrical muscle stimulation to combat fatty facial deposits, LED light technology for breakouts, acne,

fine lines and skin repair as well as MASS vibration therapy to stimulate the dermis and increase absorption of face creams and serums.

The Smarkin device interfaces with the app seamlessly, making beautiful skin effortlessly smart.

Industry

The smart beauty industry is a relatively new niche but one that is already transforming homes around the world with the addition of customised beauty products and experiences for millions of men and women.

Beauty tech really came into its own in 2017, with a number of notable brands beginning to explore the marriage of smart technology and artificial intelligence with beauty.

From the smart mirror, which provides beauty advice to the viewer, to the new Smarkin device with its tailored approach to skincare and status as the sole smart facial machine, technology is becoming closely integrated with beauty products. This movement makes beauty more inclusive and gives consumers new ways to bring beauty into their homes.

Creator of the world's first SMART skincare device seeks support from the public in new Kickstarter campaign

Leading technology and healthcare provider, Comper is about to launch its third Kickstarter campaign and is seeking support from the public to bring its latest innovative product to market.

The Smarkin is the first SMART facial machine in the world. It integrates enhanced technologies including RF, EMS, LED and micro vibrational therapy for firming the face, fending off the signs of ageing, reducing stubborn fatty facial deposits and tackles other common skin defects such as acne.

Designed to assess the most suitable skincare routine for each individual user by use of an intelligent and ground-breaking app, the Smarkin is able to dynamically provide the right treatment settings for optimum results.

Users can first test their skin using the Comper Health App and give information on changes to their skin or skin disorders, periods and allergies. Next, a personal

skincare schedule with reset functions is generated and sent to the Smarkin providing a completely tailored skincare and treatment routine.

This intelligent skincare device is the first of its kind and users can revisit the app at any time to combat changing skin issues such as breakouts and fine lines. This is the third Kickstarter campaign launched by Comper who have successfully created other innovative and technologically advanced health and wellbeing

products including the Smart Fertility Tracker which is currently a finalist in the Best of Baby Tech Awards for 2018 and winner for LUX Parent and Baby Awards 2018. Comper are currently seeking funding from the public to help bring their advanced skincare device to the market, and anyone looking to contribute will receive a generous 60% pre-order discount available this December as a thank you for their support.

Mrs Du Han, CEO and Founder of Comper Healthcare, said "There's no one size fits all solution to beautiful skin, so the Smarkin will completely revolutionise the skin care device industry.

This technologically advanced and fully personalised device as everyone deserves to feel confident about their skin and allow a fully tailored skincare routine that offers the best results, regardless of skin type, problem or age."

Comper Launches Innovative New Smart Skincare Device

Leading technology and healthcare provider, Comper, has launched its new Smart Skincare device to rejuvenate skin and help with complaints such as teenage spots and acne.

In today's world, pollution, less than perfect diets and stress all lead to a number of medical issues and complaints including skin conditions such as persistent pimples and acne which can erode self-confidence. Many people attempt to resolve their skincare issues with expensive and ineffective over-the-counter remedies, many of which, upon inspection, contain a large percentage of water and very few active ingredients. Du Han, CEO and Founder of Comper, believes that there's another way.

A new way – a smarter way

Using state of the art technology, the Comper Skincare Device is a 5 in 1 revolutionary tool proven to be more effective with anti-ageing than other leading single-function brands. Utilising Bipolar RF, 3 levels of EMS, Red LED and a clever vibration and cooling system, the Comper Smart Skincare Device App analyses the skin and manages the data in order to provide optimised treatment where it's needed most. Ideal for use on skin of all ages, the Comper Skincare Device can help with face slimming and lifting, skin complaints and anti-ageing. When used with the Comper Health App, the customised and voice-navigated system allows for a fully integrated skin management and treatment program.

Comper Healthcare Ovulation Thermometer Now Available on Amazon Smart Technology Fertility Tracker Elevates Chances of Conception

Comper Healthcare has recently announced that their app-based Smart Fertility Tracker has debuted. What began as a Kickstarter campaign has now successfully transitioned into an innovative new fertility product that is available on Amazon. The ovulation thermometer is designed to help increase the chance of pregnancy for couples who are finding conception to be a challenge.

“We are absolutely thrilled to make the new Smart Fertility Tracker available to the public,” stated a Comper Healthcare representative. “It is exciting to be a part of such state-of-the-art technology such as this ovulation thermometer device that we anticipate will help couples bring new lives into the world. It is very rewarding to see our product come full circle so now, after having a successful Kickstarter campaign featuring the Smart Fertility Tracker, we can witness the best part – the conceptions made possible because of it.”

The Fertility Tracker is an app based thermometer that assists in pinpointing the most optimal time in a woman’s cycle for conception to occur. It is quick,

convenient and amazingly precise. By simply holding the thermometer under the tongue for three minutes or less, a read out is displayed.

The information is then relayed to the app where the tracking is done and where the ultimate conception timing is indicated. There is no need to clean the thermometer. It sterilizes itself.

Comper Healthcare realizes the importance of a healthy diet and fitness regime in the process of conception so the Smart Fertility Tracker comes complete with advice on exercise and nutrition in the Comper Algorithm system. With couples becoming increasingly busy and stressed as well, the tracker as well as the advice are intended to educate and to take stress off couples who are trying to have a baby.

Comper Healthcare is a Beijing, China based leading independent healthcare and technology company that specializes in developing high end medical devices that truly benefit people such as the Fertility Tracker

that is now available for purchase online. Portable ultrasound fetal monitors and ultra-thin Smart Fitness weighing scales are among the other helpful products the company has designed.

Comper Healthcare is a finalist in the CES Best of Baby Tech Awards. Their appropriate motto for the Smart Fertility Tracker is “Seize the Day”.
